

# BRINKLEY

BEFORE YOU GO

## **RV Inspection Checklist**

- Check all tire pressures and wear. Don't forget to check the spare. Tire pressure should be checked Before the RV is traveled with, or while they are "cold."
- Check the torque of all wheel lug nuts.
- Test the braking system of the RV and tow vehicle.
- Check all jacks and be sure they are fully operational and retracted.
- Inspect all lights, running lights, clearance, exterior, and interior as well.
- Verify backup camera (if equipped) is functioning properly.
- Check the battery for good condition and inspect cables and connections.
- Inspect the 7-way plug, breakaway cable, pin box & hitch equipment.
- Ensure the propane system is properly inspected for leaks by your dealer.
- Test all safety alarms within the RV.
- Ensure entry & compartment doors are latched, and locks function properly.
- Ensure windows open and close properly and are secured for travel.
- Secure all shower, cabinet, interior, & refrigerator doors properly for travel.
- Slides, awnings, and roof vents are closed.
- Inspect the roof for any damage or cracked sealants.
- Inspect AC/filter grill & coils, and clean as needed.
- Inspect the furnace & water heater exhaust tube for any obstructions.
- Battery disconnects set to travel mode.
- Furniture is secured. Including chairs, stools, benches, ottomans, etc.
- Propane is turned off.
- Estimate your RVs total weight, including the coach, tanks, & gear, then review against your tow vehicle and coach's capacities. Consider weighing your coach at least once when fully loaded as a reference when estimating future trips. *\*Reference GVWR, UVW, & CCC in your owner's manual*
